

### Immediate Fixed Screw-Retained Provisional Implant Prosthesis ■

The immediate provisional implant prosthesis is luted to the titanium cylinders on the day of surgery and delivered to the patient to wear until the implants are ready for fabrication of the definitive prosthesis.

### Temporary Cylinders\* ■

The temporary cylinders are connected to the multi-unit abutments (MUAs) and then luted to the prosthesis.

### Multi-Unit Abutments ■

Available in straight or angled, 17 or 30 degrees, these abutments allow for the correction of implant angulation to improve screw-access hole locations.

### Angled Multi-Unit Abutment Guide ■■

The Angled Multi-Unit Abutment Guide contains color-coded notches to assist in accurately positioning angled MUAs based on the preplanned orientation.

### Osteotomy Guide ■■■

The osteotomy guide allows for the placement of the implants in the exact positions determined by the digital treatment plan. The guide is compatible with any implant system that utilizes a guided drill system.

### Seating Guide ■■■

The seating guide is designed to rest on the preextracted teeth, providing a stable reference point for accurate placement of the foundation guide.

### Foundation (Bone Reduction) Guide ■■■

Designed to sit on the buccal bone, the foundation guide provides a reliable reference for bone reduction. In FP1 cases, the guide is contoured to allow for guided scalloping.

### Fixation Pins ■■■

Fixation pins secure the foundation guide during surgery, with three color-coded lengths — green (13 mm), magenta (15 mm), and brown (20 mm) — preselected in the treatment plan.

### 3D-Printed Models ■■■

This model demonstrates the bony anatomy of the arch being treated (■■■) and the post-bone reduction implant placement (■■).

### Treatment Planning ■■■

Restorative-driven planning that incorporates a top-down treatment approach from the world's leading dental lab. Interactive approach includes online live review sessions led by experts.

### Provisional Same-Day Design ■

Same-day design service for All-on-X cases, enabling immediate delivery of provisional restoration at the time of surgery (doctor prints in office) or next day delivery (GlideWell prints and overnights).

■ Tier 1 ■ Tier 2 ■ Tier 3

Note: Surgical guides are customized for individual patients and may vary in design.
